

AGÔN Electronics strengthens its position in the testing market with the acquisition of TESTELEC Ingénierie.

AGÔN Electronics, which has been supported by **Argos Fund** since 2022, announces the acquisition of **TESTELEC Ingénierie**, a company known for its expertise in producing test benches, in-circuit and functional test fixtures and customised testing solutions for various electronic and industrial applications.

A strategic business combination that strengthens the group's expertise

This business combination is a major milestone in AGÔN Electronics' strategy of building up its electronics testing business, allowing it to offer a wider range of services. Both AGÔN Electronics – via its Tame-Test entity – and TESTELEC Ingénierie have cutting-edge technical expertise and a strong client focus. The combined group will be able to develop a vertical specialising in the testing of electronic products.

AGÔN Electronics is entering a new phase in the development of a comprehensive, integrated testing service:

- **A new key area of expertise.** AGÔN Electronics now has in-house capabilities in designing and producing test fixtures – one of TESTELEC Ingénierie's long-standing core businesses – to complement its expertise in the definition of product testing strategies and in the design, manufacturing and operational maintenance of the associated testing resources.
- **Development of generic products** for the electronics testing market, complementing its existing range of services.
- **Addition of a wiring workshop and test benches**, significantly increasing its ability to support its clients' future projects.

Bruno Picquart, CEO of **AGÔN Electronics**, said: “The arrival of TESTELEC Ingénierie within the AGÔN Electronics group represents a tremendous growth driver. The good fit between our areas of expertise will create synergies that are unique in the testing market, allowing us to provide our clients with integrated, high-performance solutions in which we handle every element in-house. Because operational excellence is crucial in our industry, this combination with TESTELEC Ingénierie allows us to bolster our position as a preferred partner in electronic testing.”

Xavier Repessé, CEO of **TESTELEC Ingénierie**, added: “Integrating TESTELEC Ingénierie within the AGÔN Electronics group will strengthen our business with major electronics manufacturers, allowing us to offer a more comprehensive range of testing expertise alongside the Tame-Test team. To develop and secure the long-term future of our business, we must also expand our export client base, which is currently limited to neighbouring countries.”

About AGÔN Electronics

Based in France, Italy, and Morocco, the AGÔN Electronics group is a European leader in high-value-added electronic products (HMLV – High Mix, Low Volume) for demanding environments. The group employs nearly 1,500 people across several complementary industrial entities (FEDD, PHENIX Électronique, TEAM31, LEROY Automation, MIOS Elettronica, TRONICO and CISTEO Medical).

AGÔN Electronics includes four EMS (Electronic Manufacturing Services) that specialise in co-designing and manufacturing complex electronic boards and systems for the most demanding sectors: aerospace, rail, defence, space and medical. With two ODM (Original Design Manufacturer) subsidiaries, the group also offers a broad portfolio of proprietary products for the rail, energy, defence and industrial markets. Additionally, AGÔN provides a range of complementary services that support its clients throughout the design, production, operational maintenance and after-sales service phases.

The addition of TESTELEC Ingénierie represents the AGÔN Electronics group’s fourth major acquisition – following MIOS in 2023, TRONICO in 2024 and CISTEO Medical in 2025 – and strengthens its position across the entire electronics value chain.

Driven by an ambitious growth strategy and a strong culture of innovation, AGÔN Electronics aims to become a leading European player in industrial electronics, combining close client relationships, technical expertise, operational excellence and a commitment to sustainability.

About TESTELEC Ingénierie

Founded in 1983, TESTELEC Ingénierie is based in Châteaubourg in northwestern France, and has 25 employees in 2026. It is a major player in the electronics testing sector, offering innovative solutions ideally suited to its clients' technological needs. The company offers a wide range of services, including in-circuit and functional test fixtures, test bench design and integration, and production tools.

TESTELEC Ingénierie has a full design office covering mechanical, electronic and software design, along with in-house mechanics and wiring workshops, allowing it to cover the whole design and manufacturing process. The company works in a wide range of sectors including transport, aerospace, telecoms, medical, manufacturing and defence.
